e-glass microfibres of representative composition@[Calcium-aluminium-silicate fibres with random orientation with the following representative composition (% given by weight): SiO2 50,0-56,0 %, Al2O3 13,0-16,0 %, B2O3 5,8-10,0 %, Na2O < 0,6 %, K2O < 0,4 %, CaO 15,0-24,0 %, MgO< 5,5 %, Fe2O3 < 0,5 %, F2 < 1,0 %. Process: typically produced by flame attenuation and rotary process. (Additional individual elements may be present at low levels@ the process list does not preclude innovation).]

IDENTIFICATION NUMBERS

MORE INFORMATION

- **Synonyms:** la lista de los procesos no excluye la innovación).]

CLASSIFICATION AND LABELLING (Regulation 1272/2008)

Symbols

GHS08

Respiratory sensitisation

Signal word: **Danger**

H Phrases

H350i : May cause cancer by inhalation.

Carc. (Cat. 1B) : Carcinogenicity
